

Dual display clone with the Intel Graphics driver

How to make it project...

1. Connect your computer to the second monitor / projector, preferably before you switch your laptop on. If it's already on, connect the cable and Windows might make a sound, telling you it's OK.
2. Right click on the Intel Graphics icon (shown above), the menu appears:

3. Hover the mouse over *Graphics options* and then *output to*

4. Hover the mouse over *Intel ® Dual Display Clone*

5. Click on *Notebook + monitor*

You should now find the image on the projector / monitor and the laptop are the same
